lyso-

Lysis, dissolution.

See: <u>lyo-</u>.

Origin: G. Lysis, a loosening

(05 Mar 2000)

Previous: lysinogen, lysinogenic, lysinuria, lysinuric protein intolerance, lysis

Next: lysoamidase, lysocephalin, lysogen, lysogenesis, lysogenic

lysoamidase

< chemical > A mixture of proteolytic enzymes from pseudomonadaceae; proteinases and phosphomonoesterases; soviet cpd

Pharmacological action: anti-infective agent

Chemical name: amidase, lyso-

(26 Jun 1999)

Previous: lysinogen, lysinogenic, lysinuria, lysinuric protein intolerance, lysis, lyso-

Next: lysocephalin, lysogen, lysogenesis, lysogenic, lysogenic bacteria

lysocephalin

A <u>lysophosphatidic acid</u> esterified with <u>serine</u> or <u>ethanolamine</u>, i.e., a <u>lysophosphatidylserine</u> or <u>ethanolamine</u>; <u>analogous</u> to <u>lysolecithin</u>.

(05 Mar 2000)

Previous: lysinogenic, lysinuria, lysinuric protein intolerance, lysis, lyso-, lysoamidase

Next: <u>lysogen</u>, <u>lysogenesis</u>, <u>lysogenic</u>, <u>lysogenic</u> bacteria

lysogen

<microbiology> A bacterial cell whose chromosome contains integrated viral DNA.

(15 Oct 1997)

Previous: <u>lysinuric protein intolerance</u>, <u>lysis</u>, <u>lyso-, lysoamidase</u>, <u>lysocephalin</u>

Next: lysogenesis, lysogenic, lysogenic bacteria, lysogenic bacterium

lysogenesis

The production of lysins.

(05 Mar 2000)

Previous: lysinuric protein intolerance, lysis, lyso-, lysoamidase, lysocephalin, lysogen

Next: lysogenic, lysogenic bacteria, lysogenic bacterium

lysogenic

- 1. Causing or having the power to cause lysis, as the action of certain antibodies and chemical substances.
- 2. Pertaining to bacteria in the state of lysogeny.

(05 Mar 2000)

Previous: <u>lysinuric protein intolerance</u>, <u>lysis</u>, <u>lyso-, lysoamidase</u>, <u>lysocephalin</u>, <u>lysogen</u>, <u>lysogenesis</u>

Next: lysogenic bacteria, lysogenic bacterium, lysogenic conversion

lysogenic bacteria

<microbiology> A bacterium which contains in its genome the DNA of a virus which is lying dormant, passively letting itself be replicated by the bacterium whenever the bacterium replicates its own genome (a lysogenic virus), but able to reactivate and destroy the bacterium at a time of the virus's choosing (becomes a lytic virus).

(15 Oct 1997)

Previous: lysis, lyso-, lysoamidase, lysocephalin, lysogen, lysogenesis, lysogenic

Next: lysogenic bacterium, lysogenic conversion, lysogenic induction

lysogenic bacterium

A <u>bacterium</u> in the <u>symbiotic condition</u> in which its <u>genome</u> includes the genome (<u>probacteriophage</u>) of a <u>temperate bacteriophage</u>; in <u>occasional</u> instances the probacteriophage dissociates from the <u>bacterial</u> genome, <u>develops</u> into <u>vegetative bacteriophage</u>, and then <u>matures</u>, causing <u>lysis</u> of the respective <u>host</u> bacterium and <u>release</u> into the <u>culture medium</u> of <u>infective temperate bacteriophage</u>, formerly, a <u>pseudolysogenic</u> bacterial <u>strain</u>, i.e., a "carrier" strain of bacteriophage of <u>low infectivity</u>.

(05 Mar 2000)

Previous: <u>lysoamidase</u>, <u>lysocephalin</u>, <u>lysogen</u>, <u>lysogenesis</u>, <u>lysogenic</u>, <u>lysogenic</u> <u>bacteria</u>

Next: <u>lysogenic conversion</u>, <u>lysogenic induction</u>, <u>lysogenic infection</u>

lysogenic conversion

lysogeny

Previous: lysogen, lysogenesis, lysogenic, lysogenic bacteria, lysogenic bacterium

Next: lysogenic induction, lysogenic infection, lysogenicity

lysogenic induction

<u>Induction</u> that occurs when <u>prophage</u> is transferred to a nonlysogenic <u>bacterium</u> by <u>conjugation</u> or by transduction.

(05 Mar 2000)

Previous: lysogenic, lysogenic bacteria, lysogenic bacterium, lysogenic conversion

Next: lysogenic infection, lysogenicity, lysogenic pathway, lysogenic strain

lysogenic infection

An <u>infective process</u> characterised by the <u>incorporation</u> of the <u>DNA</u> of the infecting <u>phage</u> into the <u>host cell</u> <u>chromosome</u>. Once incorporated, the phage DNA <u>replicates</u> along with the <u>host DNA</u>. The incorporated phage DNA is relatively <u>inactive</u>, <u>thus permitting</u> the host <u>cell</u> to continue <u>fairly normal life</u> processes.

(14 Nov 1997)

Previous: <u>lysogenic bacteria</u>, <u>lysogenic bacterium</u>, <u>lysogenic conversion</u>, <u>lysogenic induction</u>

Next: lysogenicity, lysogenic pathway, lysogenic strain, lysogenic virus

lysogenicity

The property of being lysogenic.

(05 Mar 2000)

Previous: <u>lysogenic bacterium</u>, <u>lysogenic conversion</u>, <u>lysogenic induction</u>, <u>lysogenic infection</u>

Next: lysogenic pathway, lysogenic strain, lysogenic virus, lysogenization

lysogenic pathway

< <u>virology</u>> The <u>method</u> by which a <u>virus becomes</u> a <u>dormant, passive part</u> of its <u>host</u> bacterium's <u>genome</u> (a <u>lysogenic virus</u>), choosing to <u>insert</u> its <u>DNA</u> into the host's and postponing completion of its <u>lytic cycle</u>, at which <u>time</u> it destroys the host and <u>spreads</u> its <u>progeny</u> to <u>infect</u> other <u>bacterial cells</u> (<u>enters</u> the <u>lytic pathway</u>).

(09 Oct 1997)

Previous: lysogenic conversion, lysogenic induction, lysogenic infection, lysogenicity

Next: lysogenic strain, lysogenic virus, lysogenization, lysogeny, lysokinase

lysogenic strain

A strain of bacterium that is infected with a temporate bacteriophage.

See: lysogeny.

(05 Mar 2000)

Previous: lysogenic induction, lysogenic infection, lysogenicity, lysogenic pathway

Next: lysogenic virus, lysogenization, lysogeny, lysokinase, lysolecithin

lysogenic virus

< <u>virology</u>> A <u>virus</u> which has the capability to <u>insert</u> its <u>DNA</u> into the <u>genome</u> of the <u>host bacterium</u> for <u>longterm dormancy</u>, so that the bacterium <u>replicates</u> the <u>viral DNA</u> along with its <u>own</u> and <u>passes</u> it to its offspring. The virus is able to choose when it <u>wants</u> to <u>reactivate</u> and <u>finish</u> its <u>lytic cycle</u>, at which <u>time</u> it destroys the host and <u>spreads</u> its <u>progeny</u> to <u>infect</u> other <u>bacterial cells</u>.

(09 Oct 1997)

Previous: lysogenic infection, lysogenicity, lysogenic pathway, lysogenic strain

Next: lysogenization, lysogeny, lysokinase, lysolecithin, lysolecithinase

lysogenization

The process by which a bacterium becomes lysogenic.

(05 Mar 2000)

Previous: <u>lysogenic infection</u>, <u>lysogenicity</u>, <u>lysogenic pathway</u>, <u>lysogenic strain</u>, <u>lysogenic virus</u>

Next: <u>lysogeny</u>, <u>lysokinase</u>, <u>lysolecithin</u>, <u>lysolecithinase</u>

lysogeny

<virology> The ability of some phages to survive in a bacterium as a result of the integration of their DNA into the host chromosome. The integrated DNA is termed a prophage. A regulator gene produces a repressor protein that suppresses the lytic activity of the phage, but various environmental factors, such as ultraviolet irradiation may prevent synthesis of the repressor, leading to normal phage development and lysis of the bacterium. The best example of this is bacteriophage lambda.

(18 Nov 1997)

Previous: lysogenic pathway, lysogenic strain, lysogenic virus, lysogenization

Next: <u>lysokinase</u>, <u>lysolecithin</u>, <u>lysolecithinase</u>

lysokinase

<u>Term proposed</u> for <u>activator</u> <u>agents</u> (e.g., <u>streptokinase</u>, <u>urokinase</u>, <u>staphylokinase</u>) that <u>produce plasmin</u> by <u>indirect or multiple-stage action</u> on <u>plasminogen</u>.

(05 Mar 2000)

Previous: lysogenic pathway, lysogenic strain, lysogenic virus, lysogenization, lysogeny

Next: <u>lysolecithin</u>, <u>lysolecithinase</u>, <u>lysolecithin-lecithin acyltransferase</u>

lysolecithin

A lysophosphatic acid that contains choline; capable of lysing erythrocytes.

Synonym: lysophosphatidylcholine.

(05 Mar 2000)

Previous: lysogenic strain, lysogenic virus, lysogenization, lysogeny, lysokinase

Next: lysolecithinase, lysolecithin-lecithin acyltransferase

lysolecithinase

lysophospholipase

Previous: lysogenic strain, lysogenic virus, lysogenization, lysogeny, lysokinase, lysolecithin

Next: lysolecithin-lecithin acyltransferase

lysolecithin-lecithin acyltransferase

<enzyme> An enzyme that catalyses the reversible reaction of lysolecithin and another phospholipid (e.g., phosphatidylethanolamine) to form lecithin and lysophosphatidylethanolamine; a major route in the restructuring of lecithin.

(05 Mar 2000)

Previous: lysogenic virus, lysogenization, lysogeny, lysokinase, lysolecithin, lysolecithinase

Next: lysomonogalactosyldiacylglycerol acyltransferase, lysophosphatide

lysomonogalactosyldiacylglycerol acyltransferase

<enzyme> Transfers acyl group from acyl-acyl-carrier protein to an endogenous lysomonogalactosyldiacylglycerol to form monogalactosyldiacylglycerol

Registry number: EC 2.3.1.-

Synonym: acp-lysomgdg acyltransferase, monogalactosyldiacylglycerol synthase, mgdg synthase

(26 Jun 1999)

Previous: <u>lysolecithin</u>, <u>lysolecithinase</u>, <u>lysolecithin-lecithin acyltransferase</u>

Next: <u>lysophosphatide</u>, <u>lysophosphatidic acid</u>

lysophosphatide

< biochemistry, cell biology > Mono acyl derivatives of diacyl phospholipids that are present in membranes as a result of cyclic deacylation and reacylation of phospholipids. Membranolytic in high concentrations and fusogenic at concentrations that are just sub lytic. May have important modulatory roles.

(15 Oct 1997)

Previous: lysolecithin-lecithin acyltransferase, lysomonogalactosyldiacylglycerol acyltransferase

Next: lysophosphatidic acid, lysophosphatidic acid acyltransferase

lysophosphatidic acid

A <u>phosphatidic acid</u> in which only one of the two <u>hydroxyl groups</u> of the <u>glycerophosphate</u> is esterified; most commonly, when <u>carbon-1</u> of the <u>glycerol moiety</u> is esterified (e.g., 1-acylglycerol-3-<u>phosphate</u>).

(05 Mar 2000)

Previous: <u>lysolecithin-lecithin acyltransferase</u>, <u>lysomonogalactosyldiacylglycerol acyltransferase</u>,

lysophosphatide

Next: lysophosphatidic acid acyltransferase

lysophosphatidic acid acyltransferase

1-acylglycerol-3-phosphate acyltransferase.

(05 Mar 2000)

Previous: <u>lysomonogalactosyldiacylglycerol acyltransferase</u>, <u>lysophosphatide</u>, <u>lysophosphatidic acid</u> **Next**: <u>lysophosphatidic acid-hydrolysing lysophospholipase</u>

lysophosphatidic acid-hydrolysing lysophospholipase

<enzyme> Catalyses the hydrolysis of lysophosphatidic acids

Registry number: EC 3.1.1.-

Synonym: (1-acyl-sn-glycero-3-phosphate)-hydrolysing lysophospholipase, lpa-hydrolysing

lysophospholipase, lpa-hlpl

(26 Jun 1999)

Previous: lysophosphatide, lysophosphatidic acid, lysophosphatidic acid acyltransferase

Next: lysophosphatidic acid phosphatase, lysophosphatidylcholine

lysophosphatidic acid phosphatase

<enzyme> Forms 1-acyl-sn-glycerol plus pi

Registry number: EC 3.1.3.-

(26 Jun 1999)

Previous: lysophosphatidic acid acyltransferase, lysophosphatidic acid-hydrolysing lysophospholipase

Next: lysophosphatidylcholine, lysophosphatidylcholines

lysophosphatidylcholine

lysolecithin

Previous: lysophosphatidic acid-hydrolysing lysophospholipase, lysophosphatidic acid phosphatase

Next: <u>lysophosphatidylcholines</u>, <u>lysophosphatidylserine</u>, <u>lysophospholipase</u>

lysophosphatidylcholines

<u>Derivatives</u> of <u>phosphatidylcholines</u> obtained by their <u>partial</u> <u>hydrolysis</u> which <u>removes</u> one of the <u>fatty acid</u> <u>moieties</u>.

(12 Dec 1998)

Previous: lysophosphatidic acid-hydrolysing lysophospholipase, lysophosphatidic acid phosphatase,

lysophosphatidylcholine

Next: <u>lysophosphatidylserine</u>, <u>lysophospholipase</u>

lysophosphatidylserine

Phosphatidylserin e from which one <u>fatty acid residue</u> has been removed from the <u>glycerol moiety</u>, typically at carbon-2.

Compare: lysophosphatidic acid.

(05 Mar 2000)

Previous: lysophosphatidic acid phosphatase, lysophosphatidylcholine, lysophosphatidylcholines

Next: lysophospholipase, lysophospholipase-transacylase, lysophospholipids

lysophospholipase

<enzyme> An enzyme that catalyses the hydrolysis of a single fatty acid ester bond in lysoglycerophosphatidates with the formation of glyceryl phosphatidates and a fatty acid.

Chemical name: 2-Lysophosphatidylcholine acylhydrolase

Registry number: EC 3.1.1.5

(12 Dec 1998)

Previous: lysophosphatidylcholine, lysophosphatidylcholines, lysophosphatidylserine

Next: lysophospholipase-transacylase, lysophospholipids

lysophospholipase-transacylase

<chemical>

Synonym: <u>lysophosphatidylcholine</u> lysophosphatidylcholine <u>transacylase</u>, lpta-i, lpta-ii

(26 Jun 1999)
